SUMMARY

AI engineer who likes shipping things people actually use. I build LLM-powered agents, secure full-stack web applications, computer-vision apps and business automations, and I run the IT systems of a multi-branch retail company, so I am used to production problems, not just notebooks. Recent work includes a role-based consulting platform with CRM integration, NOVA, a voice assistant that hands tasks to specialised n8n agents, and a face-recognition attendance system. BS in Artificial Intelligence; now doing an MS in Applied AI & Data Analytics at the University of Lahore.

EXPERIENCE

Web & Automation Developer — MNBEC, Lahore — Oct 2025 – Present

- Lead development of the MNBEC Portal, a full-stack consultant and client management platform (Next.js, TypeScript, PostgreSQL, Prisma) with separate portals for admins, consultants and clients.
- Build AI-assisted workflows in n8n and Zapier that connect the CRM, Gmail and Google Workspace, replacing manual data entry and follow-ups.
- Prototype Generative AI use cases for the team, such as LLM email triage and drafting, and move the useful ones into daily operations.

IT Systems & Operations Manager — Bunjoja, Lahore — Oct 2025 – Present

- Run IT for the head office and all branches: networks, ERP/POS, Google Workspace, cloud services, websites and hardware.
- Built an internal analytics dashboard (Laravel) that gives the shareholders team one place to review business data.
- Handle system integrations, vendor coordination and IT security, keeping branch operations running without a separate support team.

MNBEC and Bunjoja are affiliated companies that share one office; I work across both full-time.

AI/ML Intern — DevelopersHub Corporation (remote) — Dec 2024 – Feb 2025

- Trained and compared classical ML models for disease prediction; the best diabetes model reached 97% accuracy on a 100,000-record dataset.
- Built CNN and transfer-learning models in TensorFlow/Keras for pneumonia X-rays, skin lesions and breast histopathology images.
- Completed further tasks on credit-risk scoring, financial anomaly detection, text emotion classification and satellite-image analysis.

PROJECTS

MNBEC Portal — Consultant & Client Management Platform Private · launching soon

Next.js, React, TypeScript, PostgreSQL, Prisma, Better Auth, Redis, Docker, Playwright

- Takes consultants from application through onboarding, training and a knowledge test to qualification, then creates their Google Workspace account automatically.
- Receives qualified client leads from the CRM through HMAC-signed webhooks, with duplicate and incomplete-lead handling.
- 2FA on every staff and consultant account and database-level row security, so consultants see only their assigned projects; CI runs lint, type checks, unit, integration and E2E tests plus secret scanning.

NOVA — Multi-Agent Voice Assistant GitHub

Next.js, TypeScript, n8n, Groq (Llama), Gemini, ElevenLabs, Google APIs

- Voice-first assistant where a main n8n agent routes each request to Gmail, Google Calendar, Google Contacts and LinkedIn sub-agents, plus live web search.
- Risky actions such as sending email or deleting a contact are blocked at the workflow level until the user confirms; supports barge-in interruption.

Smart Attendance System — Face Recognition (Final Year Project) GitHub

Python, Flask, OpenCV, dlib / face_recognition, SQLAlchemy, APScheduler

- Recognises students from a live webcam feed and marks attendance with a confidence score, with a review step before records are saved.
- Full web app for courses, students and records, with CSV export, scheduled email notifications and a Railway deployment.

SmartFarm — Crop & Fertilizer Recommender GitHub

Python, scikit-learn, Flask

- Compared 10 classifiers across 22 crops (Random Forest, 99.3% test accuracy) and added a fertilizer model (KNN, 96.8%), both served through one Flask app.

AI Automation Agents (n8n) GitHub

n8n, Gemini, Gmail, Airtable

- LLM email responder that classifies incoming Gmail and drafts replies, and a chat-based inventory agent that reads and updates stock in Airtable.

Other builds: WhatsApp Bulk Messenger (Flask, Selenium, Windows installer) · Bakers 3D Cake Designer (Next.js, React Three Fiber)

SKILLS

Generative AI	LLM APIs (Gemini, Groq/Llama), AI agents, n8n agent workflows, RAG, LangChain, LangGraph, vector databases
ML & Vision	scikit-learn, TensorFlow/Keras, CNNs, transfer learning, OpenCV, dlib, NLP basics, pandas, NumPy
Backend & Web	Python, Flask, FastAPI, Django, Node.js, Next.js, React, TypeScript, Laravel, REST APIs
Data & DevOps	PostgreSQL, SQLite, Prisma, SQLAlchemy, Redis, Docker, Git/GitHub, GitHub Actions, Railway
Automation & IT	n8n, Zapier, Google Workspace admin, networking, ERP/POS support

EDUCATION

MS, Applied Artificial Intelligence & Data Analytics — University of Lahore 2026 – Expected 2027

BS, Artificial Intelligence — Hazara University, Mansehra 2021 – 2025
