Asad Ullah

AI Engineer · LLM Agents, Automation & Applied Machine Learning

Lahore, Pakistan · +92 313 7928607 · asadch4462@gmail.com · github.com/AsadUllah-AI-Eng · linkedin.com/in/asad-ullah-436a9322a

Summary

AI engineer who likes shipping things people actually use. I build LLM-powered agents, computer-vision apps and business automations, and I run the IT systems of a multi-branch retail company, so I am used to production problems, not just notebooks. My recent work includes NOVA, a voice assistant that hands tasks to specialised n8n agents for Gmail, Calendar, Contacts and LinkedIn, and a face-recognition attendance system with a Flask web app. I hold a BS in Artificial Intelligence and I am now doing an MS in Applied AI & Data Analytics at the University of Lahore.

Experience

Web & Automation Developer — MNBEC, Lahore · Oct 2025 – Present

- Build AI-assisted workflows in n8n and Zapier that connect the CRM, Gmail and Google Workspace, replacing manual data entry and follow-ups.
- Lead development of a full-stack Consultant Management System (Next.js, TypeScript, PostgreSQL, Prisma) with separate portals for admins, consultants and clients.
- Prototype Generative AI use cases for the team, such as LLM email triage and drafting, and move the useful ones into daily operations.

IT Systems & Operations Manager — Bunjoja, Lahore · Oct 2025 – Present

- Run IT for the head office and all branches: networks, ERP/POS, Google Workspace, cloud services, websites and hardware.
- Built an internal analytics dashboard (Laravel) that gives the shareholders team one place to review business data.
- Handle system integrations, vendor coordination and IT security, keeping branch operations running without a separate support team.

MNBEC and Bunjoja are affiliated companies that share one office; I work across both full-time.

AI/ML Intern (remote) — DevelopersHub Corporation · Dec 2024 – Feb 2025

- Trained and compared classical ML models for disease prediction; the best diabetes model reached 97% accuracy on a 100,000-record dataset.
- Built CNN and transfer-learning models in TensorFlow/Keras for pneumonia X-rays, skin lesions and breast histopathology images.
- Completed a second round of tasks on credit-risk scoring, financial anomaly detection, text emotion classification and satellite-image analysis.

AI Projects

NOVA — Multi-Agent Voice Assistant · GitHub *Next.js, TypeScript, n8n, Groq (Llama), Gemini, ElevenLabs, Google APIs*

- Voice-first assistant where a main n8n agent routes each request to four sub-agents: Gmail, Google Calendar, Google Contacts and a LinkedIn content writer, plus live web search.
- Risky actions like sending an email or deleting a contact are blocked at the workflow level until the user confirms, so the model cannot trigger them on its own.
- Supports barge-in: the user can interrupt mid-answer and NOVA stops and listens.

Smart Attendance System — Face Recognition (Final Year Project) · GitHub *Python, Flask, OpenCV, dlib / face_recognition, SQLAlchemy, APScheduler*

- Recognises students from a live webcam feed and marks attendance with a confidence score, with a review step before records are saved.
- Full web app for courses, students and records, with CSV export, scheduled email notifications and a cloud deployment on Railway.
- Developed and defended as my BS final year project at Hazara University.

SmartFarm — Crop & Fertilizer Recommender · GitHub *Python, scikit-learn, Flask*

- Compared 10 classifiers for crop selection across 22 crops; Random Forest reached 99.3% test accuracy.
- Added a fertilizer model (KNN, 96.8% accuracy) and served both through one Flask app.

AI Automation Agents (n8n) · GitHub *n8n, Gemini, Gmail, Airtable*

- Email responder that classifies incoming Gmail with an LLM and drafts the right reply.
- Chat-based inventory agent for a mobile-accessories shop that reads and updates stock in Airtable.

Other builds: WhatsApp Bulk Messenger (Flask, Selenium, packaged as a Windows installer) · Bakers 3D Cake Designer (Next.js, React Three Fiber).

Skills

- **Generative & Agentic AI:** LLM APIs (Gemini, Groq/Llama), AI agents, n8n agent workflows, RAG, LangChain, LangGraph, vector databases, prompt design
- **Machine Learning & Vision:** scikit-learn, TensorFlow/Keras, CNNs, transfer learning, OpenCV, dlib, face recognition, NLP basics
- **Data:** Python, pandas, NumPy, EDA, model evaluation (precision, recall, F1), Jupyter
- **Backend & Web:** Flask, FastAPI, Django, Node.js, Next.js, React, TypeScript, Laravel, REST APIs
- **Databases & Deployment:** PostgreSQL, SQLite, Prisma, SQLAlchemy, Git/GitHub, Railway, Gunicorn
- **Automation & IT:** n8n, Zapier, Google Workspace admin, networking, ERP/POS support

Education

MS, Applied Artificial Intelligence & Data Analytics — University of Lahore · 2026 – Expected 2027

BS, Artificial Intelligence — Hazara University, Mansehra · 2021 – 2025
